**SPANISH VERSION OF INTRALIBRARY LAUNCHES AT
ONLINE EDUCA MADRID**

**17-19 May 2006
Auditorium Hotel
Madrid
Stand No: 18**

A Spanish-language version of intraLibrary, the world's leading Learning Object Repository (LOR) system makes its debut at Online Educa in Madrid.

Developed by Edinburgh-based software house, Intrallect, intraLibrary is revolutionising the way the education sector manages its learning resources, by allowing institution-wide sharing, reuse and repurposing of e-learning materials and resources. Many leading academic and training institutions across Europe and the rest of the world are using intraLibrary to manage a range of learning resources, including interactive content, documents, presentations and images, using a simple, web-based interface. The software is of particular benefit to trainers and teachers, as they no longer have to waste valuable time and money on “reinventing the wheel” when preparing course content.

Dr Charles Duncan, CEO, Intrallect: “The Spanish and Latin American educational markets are exploding with e-learning initiatives. We have had a significant amount of interest from academic institutions in Spain and South America for intraLibrary.”

He added: “We have spent the past 12 months customising the system for the Spanish-speaking market and I am delighted that it is ready to launch at Online Educa Madrid.”

Intrallect has recently won second round funding of GBP 450,000 which will be used to develop the product further, employ more staff and support further entry in new overseas markets. Clients include JORUM, EuroControl, EUMETCAL, IVINURS, IVIMEDS, University of Aberdeen, Edinburgh City Council and MacQuarie University.

Notes to editors:

About Intrallect

Intrallect develops software systems which make it easier for organisations to share, re-use and re-purpose learning and training materials. Since spinning-out of the University of Edinburgh, Intrallect has established itself as the global leader for such systems for the education sector, with installations in universities and colleges of further and higher education throughout the UK, and in continental Europe and Australia.

Intrallect provides a packaged software product and consultancy, customisation, and bespoke development services. Founded in June 2000, Intrallect has experienced more than 50% growth in annual turnover in each of the last five financial years. For more information see www.intrallect.com.

About Intrallect IntraLibrary

Intralibrary is enterprise software which enables organisations to share and re-use learning resources using a simple, web-based interface. Learning resources can include documents, presentations, web pages, images, multimedia and quiz datasets. These resources are stored as “learning objects”, which makes it very easy for users to retrieve and reuse them using intraLibrary’s powerful search facilities. Intralibrary is a strategic technology that underpins a mixed learning environment. It saves the cost of “reinventing the wheel” when creating and using learning content, and helps maximise learning opportunities.
